#### **Target Details**

Secretogranin V, Secretogranin-5, Secretory granule endocrine protein I, SCG5

Background: Acts as a molecular chaperone for PCSK2/PC2, preventing its premature
activation in the regulated secretory pathway. Binds to inactive PCSK2 in the endoplasmic
reticulum and facilitates its transport from there to later compartments of the secretory
pathway where it is proteolytically matured and activated. Also required for cleavage of PCSK2
but does not appear to be involved in its folding. Plays a role in regulating pituitary hormone
secretion. The C-terminal peptide inhibits PCSK2 in vitro.
