| | Background: Possesses single-stranded DNA-stimulated ATPase and ATP-dependent DNA | | |
| | helicase (3' to 5') activity. Component of the NuA4 histone acetyltransferase complex which is | | |
| | involved in transcriptional activation of select genes principally by acetylation of nucleosomal | | |
| | histones H4 and H2A. This modification may both alter nucleosome - DNA interactions and | | |
| | promote interaction of the modified histones with other proteins which positively regulate | | |
| | transcription. This complex may be required for the activation of transcriptional programs | | |
| | associated with oncogene and proto-oncogene mediated growth induction, tumor suppressor | | |
| | mediated growth arrest and replicative senescence, apoptosis, and DNA repair. The NuA4 | | |
| | complex ATPase and helicase activities seem to be, at least in part, contributed by the | | |
| | association of RUVBL1 and RUVBL2 with EP400. NuA4 may also play a direct role in DNA repair | | |
| | when recruited to sites of DNA damage. RUVBL1 plays an essential role in oncogenic | | |
| | transformation by MYC and also modulates transcriptional activation by the LEF1/TCF1- | | |
| | CTNNB1 complex. May be able to bind plasminogen at cell surface and enhance plasminogen | | |
| | activation. | | |
| | Essential for cell proliferation. | | |
