Target Details

protein HMG4.

Background: HMGB3 belongs to the high mobility group (HMG) protein superfamily. Like HMG1 (MIM 163905) and HMG2 (MIM 163906), HMGB3 contains DNA-binding HMG box domains and is classified into the HMG box subfamily. Members of the HMG box subfamily are thought to play a fundamental role in DNA replication, nucleosome assembly and transcription (Wilke et al., 1997 [PubMed 9370291], Nemeth et al., 2006 [PubMed 16945912]).[supplied by OMIM, Mar 2008] Function : Binds preferentially single-stranded DNA and unwinds double stranded DNA. Similarity : Belongs to the HMGB family. Contains 2 HMG box DNA-binding domains.
