Alternative Name:	MED28 (MED28 Products)
Background:	Synonyms: EG1, Endothelial-derived protein 1, FKSG20, Magicin, med28, MED28_HUMAN,
	Mediator complex subunit 28, Mediator of RNA polymerase II transcription subunit 28, Mediato
	of RNA polymerase II transcription subunit 28, Mediator of RNA polymerase II transcription
	subunit 28, Merlin and Grb2-interacting cytoskeletal protein, Tumor angiogenesis marker EG-1.
	Background: Med28 is a 178 amino acid subunit of the Mediator complex that localizes to both
	nucleus and cytoplasm. Widely expressed with highest expression in vascular tissues such as
	placenta, testis and liver, Med28 participates in the regulation of Pol II-mediated gene
	expression and is thought to play a key role in signal regulation and cell proliferation. It is
	suggested that Med28 functions as a repressor of SMC (smooth muscle cell) differentiation
	and may be associated with abnormalities in SMC growth and differentiation, including
	atherosclerosis, asthma, hypertension and smooth muscle tumors.
