	extracellular signal-regulated kinase (ERK) pathway. It also interacts with and is phosphoryated
	by serine/threonine kinase 25, and is thought to function in a signaling pathway essential for
	vascular developent. Mutations in this gene are one cause of cerebral cavernous
	malformations, which are vascular malformations that cause seizures and cerebral
	hemorrhages. Multiple alternatively spliced variants, encoding the same protein, have been
	identified.
