Datasheet for ABIN6990118

anti-SARS-CoV Spike antibody (AA 650-700)

Go to Product page

Overview

Quantity:	0.1 mg
Target:	SARS-CoV Spike (SARS-CoV S)
Binding Specificity:	AA 650-700
Reactivity:	SARS Coronavirus (SARS-CoV)
Host:	Rabbit
Clonality:	Polyclonal
Conjugate:	This SARS-CoV Spike antibody is un-conjugated
Application:	ELISA

Product Details

Immunogen:	Anti-SARS-CoV Spike antibody was raised against a peptide corresponding to 15 amino acids near the center of SARS-CoV Spike glycoprotein. The immunogen is located within amino acids 650-700 of SARS-CoV Spike.
Isotype:	IgG
Purification:	SARS-CoV Spike antibody is affinity chromatography purified via peptide column.

Target Details

Target:	SARS-CoV Spike (SARS-CoV S)
Alternative Name:	SARS-CoV Spike (SARS-CoV S Products)
Target Type:	Viral Protein

Target Details

Background:	SARS-CoV Spike antibody: A novel coronavirus has recently been identified as the causative agent of SARS (Severe Acute Respiratory Syndrome). Coronaviruses are a major cause of upper respiratory diseases in humans. The genomes of these viruses are positive-stranded RNA approximately 27-31kb in length. SARS infection can be mediated by the binding of the viral spike protein, a glycosylated 139 kDa protein and the major surface antigen of the virus, to the angiotensin-converting enzyme 2 (ACE2) on target cells. This binding can be blocked by a soluble form of ACE2.
Gene ID:	1489668
UniProt:	P59594

Application Details

Application Notes:	SARS-CoV Spike antibody can be used for the detection of SARS-CoV Spike protein in ELISA. It will detect 5 ng of free peptide at 1 µ,g/mL.
Restrictions:	For Research Use only

Handling

Format:	Liquid
Concentration:	1 mg/mL
Buffer:	SARS-CoV Spike antibody is supplied in PBS containing 0.02 % sodium azide.
Preservative:	Sodium azide
Precaution of Use:	This product contains Sodium azide: a POISONOUS AND HAZARDOUS SUBSTANCE which should be handled by trained staff only.
Storage:	-20 °C,4 °C
Storage Comment:	SARS-CoV Spike antibody can be stored at 4°C for three months and -20°C, stable for up to one year. As with all antibodies care should be taken to avoid repeated freeze thaw cycles. Antibodies should not be exposed to prolonged high temperatures.
