Target Details	
Target:	BCAP29
Alternative Name:	BAP29 (BCAP29 Products)
Background:	BAP29 Antibody: Bap29 and the related protein Bap31 are endoplasmic reticulum (ER) and ER-

vesicle membrane proteins and members of the B-cell receptor-associated protein family.
These two proteins are highly homologous and can form homo- and heterodimers. Both Bap29
and Bap31 interact with membrane-bound immunoglobulins (mlgs), such as IgM and IgD,
which with Ig-alpha/Ig-beta heterodimers form B cell antigen receptors. Binding of the
Bap29/Bap31 heterodimer correlates with the ER retention of non-Ig-alpha/Ig-beta bound mlg
complexes, suggesting that Bap29 and Bap31 may act as chaperones transmembrane regions
of various proteins. Bap29 possesses multiple isoforms.
