in early neonatal onset of hypotonia, hypertrophic cardiomyopathy, lactic acidos and 3-		
methylglutaconic aciduria (3-MGC-uria), and usually cause death within the first six weeks of		
life, although some patients survive much longer. Little is known of the role of TMEM70, but it is		
conserved across multicellular eukaryotic organisms. It contains a conserved DUF1301 domain		
and two putative transmembrane regions.
