Target Details

Target:	EFCAB4B
Alternative Name:	EFCAB4B (EFCAB4B Products)
Background:	EFCAB4B Antibody: EFCAB4B, also known as Calcium release-activated calcium channel

Target Details

regulator 2A, is a novel Ca²⁺-binding EF-hand protein that is thought to play a key role in store-operated Ca²⁺ entry in T-cells by regulating CRAC channel activation. EFCAB4B acts as a cytoplasmic calcium-sensor that forms a complex with ORAI1 and STIM1 at the junctional regions between the plasma membrane and the endoplasmic reticulum upon low Ca²⁺ concentration. A closely related protein, EFCAB4A, is likely to play a similar role as EFCAB4B, but the detailed function of EFCAB4A is still under investigation.
