### Product Details

Immunogen:	IFIT1 antibody was raised against an 18 amino acid peptide near the carboxy terminus of human IFIT1. The immunogen is located within amino acids 290 - 340 of IFIT1.
Isotype:	IgG
Specificity:	IFIT1 antibody is human, mouse and rat reactive. At least three isoforms of IFIT1 are known to exist. This antibody is predicted to not cross-react with other members of the IFIT protein family.
Purification:	IFIT1 antibody is affinity chromatography purified via peptide column.

Alternative Name:	<a href="#">IFIT1 (IFIT1 Products)</a>
Background:	The interferon-induced protein with tetratricopeptide repeats 1 (IFIT1) protein is a member of a family of tetratricopeptide repeat-containing proteins whose transcription is upregulated by interferons, virus infection, and molecular patterns such as dsRNA or lipopolysaccharides (1,2). These proteins have been suggested to induce anti-viral cellular activities in response to infection (2). Together with the interferon-induced transmembrane protein 1 (IFITM1), IFIT1 inhibits the replication of the Hepatitis C virus, suggesting that it may be useful in the development of therapeutic treatments (3).
