	Steroid receptor coactivator 2, T 2, T2, Transcriptional intermediary factor 2.	
	Background: Steroid and thyroid hormones and retinoic acid regulate a complex array of gene	
	expression activity via intracellular receptor transcription factors belonging to the ligand	
	dependent nuclear receptor superfamily. Adding to the complexity of function of these	
	transcription factors are associated proteins known as coactivators and corepressors which, as	
	their names suggest, enhance or depress transcriptional activity of the nuclear receptor with	
	which they associate. One such coactivator is KAT13C / nuclear receptor coactivator 2	
	(NCOA2), also termed Glucocorticoid receptor-interacting protein 1 (GRIP1).	
Gene ID:	10499	
Pathways:	Intracellular Steroid Hormone Receptor Signaling Pathway, Regulation of Intracellular Steroid	
	Hormone Receptor Signaling, Nuclear Hormone Receptor Binding, Regulation of Lipid	
	Metabolism by PPARalpha, Regulation of Leukocyte Mediated Immunity, Positive Regulation of	
	Immune Effector Process, CXCR4-mediated Signaling Events, Thromboxane A2 Receptor
