Alternative Name:	MMRN1 (MMRN1 Products)
Background:	Multimerin is a massive, soluble protein found in platelets and in the endothelium of blood
	vessels. It is comprised of subunits linked by interchain disulfide bonds to form large, variably
	sized homomultimers. Multimerin is a factor V/Va-binding protein and may function as a carrier
	protein for platelet factor V. It may also have functions as an extracellular matrix or adhesive

Target Details

	protein. Recently, patients with an unusual autosomal-dominant bleeding disorder (factor V Quebec) were found to have a deficiency of platelet multimerin.
