| Background: | Synonyms: PlexinA2, PLXA2, PLXNA2, Semaphorin receptor OCT. |
| | Background: Plexin A2 is a coreceptor for SEMA3A and is necessary for signaling by class 3 |
| | semaphorins and subsequent remodeling of the cytoskeleton. This coreceptor plays a role in |
| | axon guidance, invasive growth and cell migration. Class 3 semaphorins bind to a complex |
| | composed of a neuropilin and a plexin in which the plexin modulates the affinity of the complex |
| | for specific semaphorins, and its cytoplasmic domain is required for the activation of down- |
| | stream signaling events in the cytoplasm. |
