Datasheet for ABIN7041542 IgE ELISA Kit

Image

Overview

Quantity:	96 tests
Target:	IgE
Reactivity:	Human
Method Type:	Sandwich ELISA
Detection Range:	3.125 ng/mL - 200 ng/mL
Minimum Detection Limit:	3.125 ng/mL
Application:	ELISA

Product Details

The kit is a sandwich enzyme immunoassay for the in vitro quantitative measurement of IgE in human serum, plasma.
Plasma, Serum, Urine
Quantitative
Colorimetric
 ELISA Micro Plate antibody coated Enzyme Conjugated Detection Antibody (100X) Calibrator Diluent Concentrate (5X) Wash Solution Concentrate (20X) Chromogen - Substrate Solution STOP Solution

Material not included:

- 1. Microplate reader with 450 \pm 10nm filter.
- 2. Precision single or multi-channel pipettes and disposable tips.
- 3. Microcentrifuge tubes for diluting samples.
- 4. Squirt bottle or Microtitre washer
- 5. Deionized or distilled water.
- 6. Container for Wash Solution
- 7. Centrifuge for sample collection
- 8. Anticoagulant for plasma collection
- 9. Incubator capable of maintaining 37 °C.
- 10. Microplate shaker

Target Details

Target:	IgE
Abstract:	IgE Products

Application Details

Sample Volume:	100 µL
Assay Time:	1 - 2 h
Plate:	Pre-coated
Protocol:	In this assay the IgE present in samples reacts with the anti-IgE antibodies, which have been
	adsorbed to the surface of polystyrene microtitre wells. After the removal of unbound proteins
	by washing, anti-IgE antibodies conjugated with horseradish peroxidase (HRP) are added.
	These enzyme-labeled antibodies form complexes with the previously bound IgE. Following
	another washing step, the enzyme bound to the immunosorbent is assayed by the addition of a
	chromogenic substrate, 3,3',5,5'-tetramethylbenzidine (TMB). The quantity of bound enzyme
	varies directly with the concentration of IgE in the sample tested; thus, the absorbance, at 450
	nm, is a measure of the concentration of IgE in the test sample. The quantity of IgE in the test
	sample can be interpolated from the standard curve constructed from the standards, and
	corrected for sample dilution.
Reagent Preparation:	 Bring all reagents to room temperature (16°C to 25°C) before use.
	• Diluent Concentrate - The Diluent Solution supplied is a 5X Concentrate and must be diluted
	1/5 with distilled or deionized water (1 part buffer concentrate, 4 parts dH2O).
	Wash Solution Concentrate - The Wash Solution supplied is a 20X Concentrate and must be
	diluted 1/20 with distilled or deionized water (1 part buffer concentrate, 19 parts dH2O).
	Crystal formation in the concentrate may occur when storage temperatures are low.

All rights reserved.

	 Warming of the concentrate to 30-35°Cbefore dilution can dissolve crystals. Enzyme-Antibody Conjugate - Calculate the required amount of working conjugate solution for each microtitre plate test strip by adding 10 µL Enzyme-Antibody Conjugate to 990 µL of 1X Diluent for each test strip to be used for testing. Dilute immediately before use and protect from light. Mix uniformly, but gently. Avoid foaming. Pre-coated ELISA Micro Plate - Ready to use as supplied. Unseal foil pouch and remove plate from pouch. Remove all strips and wells that will not be used in the assay and place back in pouch and re-seal along with desiccant. Calibrator – Prepare according to the lot specific Certificate of Analysis.
Sample Preparation:	 It is recommended to use fresh samples without long storage, otherwise protein degradation and denaturationmay occur in these samples, leading to false results. Samples should therefore be stored for a short periodat 2 - 8 °C or aliquoted at -20 °C (≤1 month) or -80 °C (≤ 3 months). Repeated freeze-thawcycles should be avoided. Prior to assay, the frozen samples should be slowly thawed and centrifuged toremove precipitates. If the sample type is not specified in the instructions, a preliminary test is necessary to determinecompatibility with the kit. If a lysis buffer is used to prepare tissue homogenates or cell culture supernatant, there is a possibility of causing a deviation due to the introduced chemical substance. The recommended dilution factor is for reference only. Please estimate the concentration of the samples before performing the test. If the values are not in therange of the standard curve, the optimal sample dilution for the particular experiment has to be determined.Samples should then be diluted with PBS (pH =7.0-7.2).
	Note:
	The assay requires that each test sample be diluted before use. All samples should be assayed
	in duplicate each time the assay is performed. The recommended dilutions are only
	suggestions. Dilutions should be based on the expected concentration of the unknown sample
	such that the diluted sample falls within the dynamic range of the standard curve. If unsure of sample level, a serial dilution with one or two representative samples before running the entire plate is highly recommended.
	Serum samples – Recommended starting dilution is 1/200. To prepare a 1/200 dilution of a sample, transfer 2 μ L of sample to 398 μ L of 1X diluent. This gives you a 1/200 dilution. Mix thoroughly.
	Plasma samples – Recommended starting dilution is 1/200. To prepare a 1/200 dilution of a sample, transfer 2 μ L of sample to 398 μ L of 1X diluent. This gives you a 1/200 dilution. Mix thoroughly.
Assay Procedure:	 All samples and standards should be assayed in duplicates. The Standards and the test sample(s) should be loaded into the ELISA wells as quickly as possible to avoid a shift in OD readings. Using a multichannel pipette would reduce this

Order at www.antibodies-online.com | www.antikoerper-online.de | www.anticorps-enligne.fr | www.antibodies-online.cn International: +49 (0)241 95 163 153 | USA & Canada: +1 877 302 8632 | support@antibodies-online.com Page 3/5 | Product datasheet for ABIN7041542 | 09/10/2023 | Copyright antibodies-online. 	occurrence. Pipette 100 μL of Standard 0 (0.0 ng/mL) in duplicate Standard 1 (3.13 ng/mL) in
	duplicate Standard 2 (6.25 ng/mL) in duplicate Standard 3 (12.50 ng/mL) in duplicate Standard
	4 (25 ng/mL) in duplicate Standard 5 (50 ng/mL) in duplicate Standard 6 (100 ng/mL) in
	duplicate Standard 7 (200 ng/mL) in duplicate
	3. Pipette 100 μ L of sample (in duplicate) into pre designated wells.
	4. Incubate the micro titer plate at room temperature for sixty (60 \pm 2) minutes. Keep plate
	covered and level during incubation.
	5. Following incubation, aspirate the contents of the wells.
	6. Completely fill each well with appropriately diluted Wash Solution and aspirate. Repeat three
	times, for a total of four washes. If washing manually: completely fill wells with wash buffer,
	invert the plate then pour/shake out the contents in a waste container. Follow this by sharply
	striking the wells on absorbent paper to remove residual buffer. Repeat 3 times for a total of
	four washes.
	7. Pipette 100 μ L of appropriately diluted Enzyme-Antibody Conjugate to each well. Incubate at
	room temperature for ten (10 \pm 2) minutes. Keep plate covered in the dark and level during
	incubation.
	8. Wash and blot the wells as described in Steps 5/6.
	9. Pipette 100 μ L of TMB Substrate Solution into each well.
	10. Incubate in the dark at room temperature for precisely ten (10) minutes.
	11. After ten minutes, add 100 μ L of Stop Solution to each well.
	12. Determine the absorbance (450 nm) of the contents of each well within 30 minutes.
	Calibrate the plate reader to manufacturer's specifications.
Assay Precision:	Intra-assay Precision (Precision within an assay): 3 samples with low, middle and high level of
	target were tested 20 times on one plate, respectively.
	Inter-assay Precision (Precision between assays): 3 samples with low, middle and high level of
	target were tested on 3 different plates, 8 replicates in each plate.
	CV(%) = SD/meanX100
	Intra-Assay: CV < 10%
	Inter-Assay: CV < 10%
Restrictions:	For Research Use only
Handling	
Storage:	4 °C
Storage Comment:	1. For unopened kit: All reagents should be stored according to the labels on the vials. All
