Datasheet for ABIN7041557 Myoglobin ELISA Kit

Image

Overview

Quantity:	96 tests
Target:	Myoglobin (MB)
Reactivity:	Rat
Method Type:	Sandwich ELISA
Detection Range:	6.25 ng/mL - 200 ng/mL
Minimum Detection Limit:	6.25 ng/mL
Application:	ELISA

Product Details

The kit is a sandwich enzyme immunoassay for the in vitro quantitative measurement of myoglobin in rat serum, plasma.
Plasma, Serum, Urine
Quantitative
Colorimetric
 ELISA Micro Plate antibody coated Enzyme Conjugated Detection Antibody (100X) Calibrator Diluent Concentrate (5X) Wash Solution Concentrate (20X) Chromogen - Substrate Solution STOP Solution

Material not included:

- 1. Microplate reader with 450 \pm 10nm filter.
- 2. Precision single or multi-channel pipettes and disposable tips.
- 3. Microcentrifuge tubes for diluting samples.
- 4. Squirt bottle or Microtitre washer
- 5. Deionized or distilled water.
- 6. Container for Wash Solution
- 7. Centrifuge for sample collection
- 8. Anticoagulant for plasma collection
- 9. Incubator capable of maintaining 37 °C.
- 10. Microplate shaker

Target Details

Target:	Myoglobin (MB)
Alternative Name:	Myoglobin (MB Products)
Pathways:	Brown Fat Cell Differentiation

Application Details

Sample Volume:	100 μL
Assay Time:	1.5 h
Plate:	Pre-coated
Protocol:	In this assay the myoglobin (MY) present in samples reacts with the anti-MY antibodies, which
	have been adsorbed to the surface of polystyrene microtitre wells. After the removal of
	unbound proteins by washing, anti-MY antibodies conjugated with horseradish peroxidase
	(HRP) are added. These enzyme-labeled antibodies form complexes with the previously bound
	MY. Following another washing step, the enzyme bound to the immunosorbent is assayed by
	the addition of a chromogenic substrate, 3,3',5,5'-tetramethylbenzidine (TMB). The quantity of
	bound enzyme varies directly with the concentration of MY in the sample tested; thus, the
	absorbance, at 450 nm, is a measure of the concentration of MY in the test sample. The
	quantity of MY in the test sample can be interpolated from the standard curve constructed from
	the standards, and corrected for sample dilution.
Reagent Preparation:	 Bring all reagents to room temperature (16°C to 25°C) before use.
	• Diluent Concentrate - The Diluent Solution supplied is a 5X Concentrate and must be diluted
	1/5 with distilled or deionized water (1 part buffer concentrate, 4 parts dH2O).
	Wash Solution Concentrate - The Wash Solution supplied is a 20X Concentrate and must be

Order at www.antibodies-online.com | www.antikoerper-online.de | www.anticorps-enligne.fr | www.antibodies-online.cn International: +49 (0)241 95 163 153 | USA & Canada: +1 877 302 8632 | support@antibodies-online.com Page 2/5 | Product datasheet for ABIN7041557 | 09/10/2023 | Copyright antibodies-online. All rights reserved.

	 diluted 1/20 with distilled or deionized water (1 part buffer concentrate, 19 parts dH2O). Crystal formation in the concentrate may occur when storage temperatures are low. Warming of the concentrate to 30-35°Cbefore dilution can dissolve crystals. Enzyme-Antibody Conjugate - Calculate the required amount of working conjugate solution for each microtitre plate test strip by adding 10 µL Enzyme-Antibody Conjugate to 990 µL of 1X Diluent for each test strip to be used for testing. Dilute immediately before use and protect from light. Mix uniformly, but gently. Avoid foaming. Pre-coated ELISA Micro Plate - Ready to use as supplied. Unseal foil pouch and remove plate from pouch. Remove all strips and wells that will not be used in the assay and place back in pouch and re-seal along with desiccant. Calibrator – Prepare according to the lot specific Certificate of Analysis.
Sample Preparation:	 It is recommended to use fresh samples without long storage, otherwise protein degradation and denaturationmay occur in these samples, leading to false results. Samples should therefore be stored for a short periodat 2 - 8 °C or aliquoted at -20 °C (≤1 month) or -80 °C (≤ 3 months). Repeated freeze-thawcycles should be avoided. Prior to assay, the frozen samples should be slowly thawed and centrifuged toremove precipitates. If the sample type is not specified in the instructions, a preliminary test is necessary to determinecompatibility with the kit. If a lysis buffer is used to prepare tissue homogenates or cell culture supernatant, there is a possibility of causing a deviation due to the introduced chemical substance. The recommended dilution factor is for reference only. Please estimate the concentration of the samples before performing the test. If the values are not in therange of the standard curve, the optimal sample dilution for the particular experiment has to be determined. Samples should then be diluted with PBS (pH =7.0-7.2).
	 Note: The assay requires that each test sample be diluted before use. All samples should be assayed in duplicate each time the assay is performed. The recommended dilutions are only suggestions. Dilutions should be based on the expected concentration of the unknown sample such that the diluted sample falls within the dynamic range of the standard curve. If unsure of sample level, a serial dilution with one or two representative samples before running the entire plate is highly recommended. Serum samples – Recommended starting dilution is 1/5. To prepare a 1/5 dilution of a sample, transfer 60 μL of sample to 240 μL of 1X diluent. This gives you a 1/5 dilution. Mix thoroughly each stage. Plasma samples – Recommended starting dilution is 1/5. To prepare a 1/5 dilution of a sample, transfer 60 μL of sample to 240 μL of 1X diluent. This gives you a 1/5 dilution. Mix thoroughly each stage.
Assay Procedure:	 All samples and standards should be assayed in duplicates. The Standards and the test sample(s) should be loaded into the ELISA wells as quickly as

Handling

Storage:	4 °C
Storage Comment:	 For unopened kit: All reagents should be stored according to the labels on the vials. All reagents should be stored at 4 °C for long term storage. Keep away from heat or direct sunlight. For opened kits: the remaining reagents must be stored according to the above storage conditions. In addition, please return the unused wells to the foil pouch containing the desiccant and seal the foil pouch with the zipper.
Expiry Date:	6 months
