Target Details

Background: Phospholipase A2 activator protein (PLAP), activates PLA2 (phospholipase A2
enzyme) and is an important mediator of eicosanoid generation. Also known as a pro-
inflammatory agent, PLAP has been found in inflamed tissues and synovial fluid from patients
with rheumatoid arthritis. As such, it is believed to play an important role in the regulation of
inflammatory diseases. The formation of PLAP can be stimulated by IL-1 beta and TNF-alpha.
