Target Details	
Background:	Synonyms: SBP, SBP1, Selenbp2, Selenium binding protein 2, Selenium binding protein1, SELNBP1, SP56, 56 kDa selenium binding protein.
	Background: Selenium is an essential trace element that confers tolerance to toxicity arising
	through exposure to heavy metals or other reactive xenobiotics. Selenium exhibits potent
	anticarcinogenic properties, and deficiency of selenium may cause certain neurologic diseases.
	Both effects are attributed to selenium-binding proteins. Selenium binding protein 1 is down-
	regulated in lung adenocarcinoma, colorectal cander and ovarian cancer. It is two-fold
	upregulated in the brains of patients suffering from schizophrenia, and is therefore a biomarker for this disease.
