Background:	The product of this gene is one of four proteins (cofactors A, D, E, and C) involved in the
	pathway leading to correctly folded beta-tubulin from folding intermediates. Cofactors A and D
	are believed to play a role in capturing and stabilizing beta-tubulin intermediates in a quasi-
	native confirmation. Cofactor E binds to the cofactor D/beta-tubulin complex, interaction with
	cofactor C then causes the release of beta-tubulin polypeptides that are committed to the
