	Background: Essential for cardiac morphogenesis, particularly for the formation of the right
	ventricle and of the aortic arch arteries. Required for vascular development and regulation of
	angiogenesis, possibly through a VEGF signaling pathway. Plays also an important role in limb
	development, particularly in the establishment of anterior-posterior polarization, acting as an
	upstream regulator of sonic hedgehog (SHH) induction in the limb bud. Is involved in the
	development of branchial arches, which give rise to unique structures in the head and neck.
	Binds DNA on E-box consensus sequence 5'-CANNTG-3' (By similarity).
