Target Details

Target:	CD68
Alternative Name:	CD68 (CD68 Products)
Background:	This gene encodes a 110-kD transmembrane glycoprotein that is highly expressed by human

Target Details

monocytes and tissue macrophages. It is a member of the lysosomal/endosomal-associated membrane glycoprotein (LAMP) family. The protein primarily localizes to lysosomes and endosomes with a smaller fraction circulating to the cell surface. It is a type I integral membrane protein with a heavily glycosylated extracellular domain and binds to tissue- and organ-specific lectins or selectins. The protein is also a member of the scavenger receptor family. Scavenger receptors typically function to clear cellular debris, promote phagocytosis, and mediate the recruitment and activation of macrophages. Alternative splicing results in multiple transcripts encoding different isoforms. [provided by RefSeq, Jul 2008]

Molecular Weight:	predicted molecular mass of 32.4 kDa after removal of the signal peptide. The apparent molecular mass of CD68-His is 55-130 kDa due to glycosylation.
UniProt:	P34810
