|                     | Background: Nudel is important for normal cortical development. It is invovled in microtubule       |

|                     | analysis of mouse tissues shows abundant expression of Nudel in brain and testis, and much          |

|                     | Lis1 are both found in fractions enriched for postsynaptic density proteins. Immunostaining of      |
|                     | embryonic day 18 mouse brain sections revealed staining of migrating neurons and                    |
