Alternative Name:	PTPN7 (PTPN7 Products)	
Background:	Synonyms: PTPN7phospho S246, BPTP 4, BPTP4, Dual specicity phosphatase 1,	
	Hematopoietic protein tyrosine phosphatase, LC PTP, LCPTP, LPTP, Protein tyrosine	
	phoshatase non receptor type stress induced, Protein tyrosine phoshatase nonreceptor type	
	stress induced, Protein tyrosine phosphatase LC PTP, Protein tyrosine phosphatase non	
	receptor type 7, PTPN 7, PTPNI, Tyrosine protein phosphatase non receptor type 7, PTN7_HUMAN.	
	Background: The protein encoded by this gene is a member of the protein tyrosine phosphatas	
	(PTP) family. PTPs are known to be signaling molecules that regulate a variety of cellular	
	processes including cell growth, differentiation, mitotic cycle, and oncogenic transformation.	
	This gene is preferentially expressed in a variety of hematopoietic cells, and is an early	
	response gene in lymphokine stimulated cells. The non-catalytic N-terminus of this PTP can	
	interact with MAP kinases and suppress the MAP kinase activities. This PTP was shown to be	
	involved in the regulation of T cell antigen receptor (TCR) signaling, which was thought to	
	function through dephosphorylating the molecules related to MAP kinase pathway. Multiple	
	alternatively spliced transcript variants have been found for this gene. [provided by RefSeq].
