## **Target Details**

Target:	HNRNPA0
Alternative Name:	HNRNPA0 (HNRNPA0 Products)
Background:	Synonyms:HNRPA0 Background:This gene belongs to the A/B subfamily of ubiquitously expressed heterogeneous nuclear ribonucleoproteins (hnRNPs). The hnRNPs are RNA binding proteins and they complex with heterogeneous nuclear RNA (hnRNA). These proteins are
	associated with pre-mRNAs in the nucleus and appear to influence pre-mRNA processing and

other aspects of mRNA metabolism and transport. While all of the hnRNPs are present in the	ne
nucleus, some seem to shuttle between the nucleus and the cytoplasm. The hnRNP proteir	าร
have distinct nucleic acid binding properties. The protein encoded by this gene has two repr	eats
of quasi-RRM domains that bind RNAs, followed by a glycine-rich C-terminus.	

Molecular Weight:	37 kDa
Gene ID:	10949
