#### **Target Details**

| Target:           | NCK2   |
|-------------------|--|
| Alternative Name: | NCK2 (NCK2 Products)   |
| Background:       | Synonyms:GRB4 Background:This gene encodes a member of the NCK family of adaptor proteins. The protein contains three SH3 domains and one SH2 domain. The protein has no |
|                   | known catalytic function but has been shown to bind and recruit various proteins involved in the   |
|                   | regulation of receptor protein tyrosine kinases. It is through these regulatory activities that this   |
|                   | protein is believed to be involved in cytoskeletal reorganization. Alternate transcriptional splice  |
