l arget Details		
Alternative Name:	TSC2 (TSC2 Products)	
Background:	Synonyms: TSC2phospho S1410,FLJ43106, LAM, TSC2, TSC2_HUMAN, TSC4, Tuberin,	
	Tuberous sclerosis 2 protein.	
	Background: Tuberin, or TSC2 (Tuberous sclerosis complex), is implicated as a tumor	
	suppressor. It may function in vesicular transport, and may also play a role in the regulation of	
	cell growth arrest and in the regulation of transcription mediated by steroid receptors.	
	Interaction between hamartin (TSC1) and tuberin may facilitate vesicular docking. It specifically	
	stimulates the intrinsic GTPase activity of the Ras related protein RAP1A and RAB5, suggesting	
	a possible mechanism for its role in regulating cellular growth. Mutations in tuberin lead to	
	constitutive activation of RAP1A in tumors. At least three isoforms of Tuberin exist.
