	protein will be produced on the basis of on a Custom Service Project. We will make sure that
	every step in the production is successful from the design of the expression plasmid to the
	expression and purification of the final protein. Our experts in the lab will ensure that you
	receive a correctly folded protein.
	The concentration of our recombinant proteins is measured using the absorbance at 280nm.
	The protein's absorbance will be measured in several dilutions and is measured against its
	specific reference buffer. The concentration of the protein is calculated using its specific
	absorption coefficient. We use the Expasy's protparam tool to determine the absorption
	coefficient of each protein.
Purification:	Three step purification of proteins expressed in baculovirus infected SF9 insect cells:
	<ol> <li>Membrane proteins are fractioned by ultracentrifugation and subsequently solubilized with different detergents (detergent screen). Samples are analyzed by Western blot.</li> <li>The best performing detergent is used for solubilization and the proteins are purified via their rho1D4 tag via two rho1D4 antibody columns: one DTT resistant, the other one not. Eluate fractions are analyzed by Western blot.</li> <li>Protein containing fractions of the best purification are subjected to second purification step through size exclusion chromatograph. Eluate fractions are analyzed by SDS-PAGE and Western blot.</li> </ol>
Purity:	>95 % as determined by SDS PAGE, Size Exclusion Chromatography and Western Blot.
Sterility:	0.22 µm filtered
Endotoxin Level:	Endotoxins have not been removed. Please contact us if you require an endotoxin-free version
	of this product.
Grade:	Crystallography grade
Biological Activity Comment:	Protein has not been tested for activity yet.
