Product Details

Immunogen:	Recombinant full-length human HOMEZ protein
lsotype:	lgG2a
Specificity:	Homeodomain-containing proteins function as transcription factors that typically switch on
	cascades of other genes. Usually homeodomain proteins act in the promoter region of their
	target genes as complexes with other transcription factors, leading to much higher target
	specificity than a single homeodomain protein. HOMEZ (Homeobox and leucine zipper protein)
	is a 525 amino acid nuclear protein that contains 3 atypical homeodomains, 2 leucine zipper-
	like motifs, proline and serine-rich motifs and an acidic domain. Within homeodomain 2, it
	contains a putative nuclear localization signal. HOMEZ shares significant sequence similarity
	with mouse ZHX1 and sequences that are homologous to HOMEZ are restricted to vertebrates
	Likely functioning as a transcription regulator, HOMEZ is ubiquitously expressed with highest
	levels found in in ovary, testis, kidney, fetal lung and kidney.

Cross-Reactivity (Details): Human.
