## Target Details

Background:	Synonyms: C3orf11, FUS1, Fusion 1 protein, PAP, PDAP2, PDGFA associated protein 2, Tumor
	suppressor candidate 2, TUSC 2, TUSC2_HUMAN.
	Background: TUSC2/FUS1 is a novel tumor suppressor gene identified in the human
	chromosome 3p21.3 region where allele losses and genetic alterations occur early and
	frequently for many human cancers. Expression of TUSC2 protein is absent or reduced in the
	majority of lung cancers and premalignant lung lesions. Restoration of TUSC2 function in
	3p21.3-deficient non-small cell lung carcinoma cells significantly inhibits tumor cell growth by
	induction of apoptosis and alteration of cell cycle kinetics. TUSC2 may induce apoptosis
	through the activation of the intrinsic mitochondrial-dependent and Apaf-1-associated
	pathways and inhibit the function of protein tyrosine kinases including EGFR, PDGFR, AKT, c-
	Abl, and c-Kit.
