## **Target Details**

Background:	Synonyms: Brain and reproductive organ expressed TNFRSF1A modulator, BRCA1/BRCA2		
	containing complex subunit 4, BRCA1/BRCA2 containing complex subunit 45, BRCC4, BRCC45		
	BRE_HUMAN.		
	Background: BRCC45 was initially suggested to be a housekeeping protein that is highly		
	expressed in brain and reproductive organs. Later experiments indicated BRCC45 forms a		
	complex with the breast and ovarian predisposition proteins BRCA1 and BRCA2 as well as		
	RAD51 and BRCC36. This complex has a ubiquitin E3 ligase activity and is thought to enhance		
	cellular survival following DNA damage. BRCC45 has also been suggested to function as a		
	death receptor associated anti apoptotic protein by inhibiting the BID induced activation of the		
	mitochondrial apoptotic pathway. Higher levels of BRCC45 were detected in the majority of		
	hepatocellular carcinomas, suggesting that BRCC45 may promote tumorigenesis when		
	overexpressed. At least three isoforms of BRCC45 are known to exist.
