## Target Details

	chromatin, limiting DNA accessibility to the cellular machineries which require DNA as a template. Histones thereby play a central role in transcription regulation, DNA repair, DNA replication and chromosomal stability. DNA accessibility is regulated via a complex set of post- translational modifications of histones, also called histone code, and nucleosome remodeling. ### Immunohistochemistry

**Image 1.** Chromatin Immunoprecipitation Hela (4\*10 6) were treated with Micrococcal Nuclease, sonicated, and immunoprecipitated with  $8 \mu g$  anti-HIST1H2BB (ABIN7139166) or a control normal rabbit IgG. The resulting ChIP DNA was quantified using real-time PCR with primers against the  $\beta$ -Globin promoter.
