Target Details

Target:	SUPT16H
Alternative Name:	SPT16 (SUPT16H Products)
Background:	Background: Component of the FACT complex, a general chromatin factor that acts to reorganize nucleosomes. The FACT complex is involved in multiple processes that require DNA

Target Details

as a template such as mRNA elongation, DNA replication and DNA repair. During transcription elongation the FACT complex acts as a histone chaperone that both destabilizes and restores nucleosomal structure. It facilitates the passage of RNA polymerase II and transcription by promoting the dissociation of one histone H2A-H2B dimer from the nucleosome, then subsequently promotes the reestablishment of the nucleosome following the passage of RNA polymerase II (Probable).

Aliases: SPT16 antibody, At4g10710 antibody, T12H20.3 antibody, FACT complex subunit SPT16 antibody, Facilitates chromatin transcription complex subunit SPT16 antibody
