Target Details

Target:	MICAL2
Alternative Name:	MICAL2 (MICAL2 Products)
Background:	Background: Nuclear monooxygenase that promotes depolymerization of F-actin by mediating
	oxidation of specific methionine residues on actin and regulates the SRF signaling. Acts by

Target Details

modifying nuclear actin subunits through the addition of oxygen to form methionine-sulfoxide, leading to promote actin filament severing and prevent repolymerization. Acts as a key regulator of the SRF signaling pathway elicited by nerve growth factor and serum: mediates oxidation and subsequent depolymerization of nuclear actin, leading to increase MKL1/MRTF-A presence in the nucleus and promote SRF:MKL1/MRTF-A-dependent gene transcription. Does not activate SRF:MKL1/MRTF-A through RhoA.
