	gene.Ribosomes, the organelles that catalyze protein synthesis, consist of a small 40S subunit

Target Details

and a large 60S subunit. Together these subunits are composed of 4 RNA species and approximately 80 structurally distinct proteins. This gene encodes a ribosomal protein that is a component of the 60S subunit. The protein belongs to the L27E family of ribosomal proteins. It is located in the cytoplasm. As is typical for genes encoding ribosomal proteins, there are multiple processed pseudogenes of this gene dispersed through the genome.

Aliases: RPL27 antibody, 60S ribosomal protein L27 antibody, Large ribosomal subunit protein eL27 antibody
