	density lipoproteins (HDL) and the triacylglycerol-rich lipoproteins in the plasma and makes up
	about 10 % of the protein of the VLDL and 2 % of that of HDL. Appears to interfere directly with
	fatty acid uptake and is also the major plasma inhibitor of cholesteryl ester transfer protein
	(CETP). Binds free fatty acids and reduces their intracellular esterification. Modulates the
	interaction of APOE with beta-migrating VLDL and inhibits binding of beta-VLDL to the LDL
	receptor-related protein.
