Background:	Synonyms: EPG, Epigen precursor, Epithelial mitogen, EPGN_HUMAN.
	Background: Epigen is an EGF-related polypeptide growth factor that signals through the ErbB
	receptor-1. It is produced in several tissues, including the testis, liver, heart and in certain tumor
	cells. Epigen is mitogenic for fibroblasts and epithelial cells. Human Epigen is initially
	synthesized as a glycosylated 14.7 kDa transmembrane precursor protein, which is processed
	by proteolytic cleavage to produce a mature soluble sequence.
Gene ID:	255324
