	system. Inhibits BMP2-induced cytodifferentiation of PDL cells by preventing its binding to
	BMPR1B/BMP type-1B receptor, resulting in inhibition of BMP-dependent activation of SMAD
	proteins (By similarity). Critical regulator of TGF-beta in articular cartilage and plays an essential
	role in cartilage homeostasis and osteoarthritis (OA) pathogenesis. Negatively regulates
	chondrogenesis in the articular cartilage by blocking the TGF-beta/receptor interaction on the
	cell surface and inhibiting the canonical TGF-beta/Smad signal. Binds calcium and plays a role
	in osteoblast-driven collagen biomineralization activity.
