	development and spermatogenesis. May play a role in ossification.
	containing in their 3\'-UTR the consensus ARE sequence element. May function in sex
	regulation of telomere length. Plays a role in degradation and deadenylation of mRNAs
	accurate reverse transcription and is disrupted by quadruplex formation. May be involved in
	TERC 5\'-end to promote P1 helix formation, the P1 helix acts as a template boundary ensuring
	component (TERC) 5\'-end (nucleotides 1-43) and unwinds an internal quadruplex formation in
	of YY1 and ALPL genes and regulates their expression. Binds to telomerase RNA template
	derived from the ZIC1 and the MYC promoters. Binds to quadruplex structures in the promoters
	tetramolecular RNA and DNA quadruplex structures. Unwinds intramolecular quadruplexes
