| | proliferation, as well as cell invasion and metastasis. Acts as an E3 ubiquitin-protein ligase |
|---------------------|--|
| | regulating NF-kappa-B signaling and regulates both canonical and non-canonical NF-kappa-B |
| | signaling by acting in opposite directions: acts as a positive regulator of the canonical pathway |
| | and suppresses constitutive activation of non-canonical NF-kappa-B signaling. The target |
| | proteins for its E3 ubiquitin-protein ligase activity include: RIPK1, RIPK2, RIPK3, RIPK4, CASP3, |
| | CASP7, CASP8, IKBKE, TRAF1, and BCL10. Acts as an important regulator of innate immune |
| | signaling via regulation of Toll-like receptors (TLRs), Nodlike receptors (NLRs) and RIG-I like |
| | receptors (RLRs), collectively referred to as pattern recognition receptors (PRRs). Protects cells |
| | from spontaneous formation of the ripoptosome, a large multi-protein complex that has the |
| | capability to kill cancer cells in a caspase-dependent and caspase-independent manner. |
| | Suppresses ripoptosome formation by ubiquitinating RIPK1 and CASP8. |
