## **Target Details**

Background:	Synonyms: FGF-20, Fgf20, FGF20CHUMAN, FGFK, Fibroblast Growth Factor 20.	
	Background: FGF20 is secreted heparin binding growth factor that is a member of the FGF	
	family. FGF family members possess broad mitogenic and cell survival activities, and are	
	involved in a variety of biological processes including embryonic development cell growth,	
	morphogenesis, tissue repair, tumor growth and invasion by promoting cellular proliferation and	
	differentiation. The gene for FGF20 was shown to be expressed in normal brain, particularly the	
	cerebellum. FGF20 signals through the FGFR 2c and 3c and is expressed during limb and brain	
	development.	
Gene ID:	26281
