	Background: FGF22 is a member of the fibroblast growth factor (FGF) family. FGF family
	members possess broad mitogenic and cell survival activities and are involved in a variety of
	biological processes including embryonic development, cell growth, morphogenesis, tissue
	repair, tumor growth and invasion. The mouse homolog of this gene was found to be
	preferentially expressed in the inner root sheath of the hair follicle, which suggested a role in
	hair development.Fibroblast Growth Factor-22 stimulates the proliferation and activation of
	cells that express FGF receptor.
Gene ID:	27006
Pathways:	RTK Signaling, Fc-epsilon Receptor Signaling Pathway, EGFR Signaling Pathway, Neurotrophin
	Signaling Pathway
