	protection against immunodetection, both functions are probably implicating the negative
	surface charge provided by its O-linked oligosaccharides in the sperm glycocalyx. Involved in
	binding of sperm to oviductal epithelial cells to form a sperm reservoir until ovulation. Release
	from the sperm surface during capacitation and ovaluation by an elevation of oviductal fluid pH
	is unmasking other surface components and allows sperm to penetrate the cumulus matrix
	and bind to the zona pellucida of the oocyte (By similarity). In vitro has antimicrobial activity and
	may inhibit LPS-mediated inflammation (PubMed:19373462, PubMed:23229569).
