	complex that mediates silencing of a fraction of rDNA by recruiting histone-modifying enzymes
	and DNA methyltransferases, leading to heterochromatin formation and transcriptional
	silencing. In the complex, it plays a central role by being recruited to rDNA and by targeting
	chromatin modifying enzymes such as HDAC1, leading to repress RNA polymerase I
	transcription. Recruited to rDNA via its interaction with TTF1 and its ability to recognize and
	bind histone H4 acetylated on \\\'Lys-16\\\' (H4K16ac), leading to deacetylation of H4K5ac,
	H4K8ac, H4K12ac but not H4K16ac. Specifically binds pRNAs, 150-250 nucleotide RNAs that
	are complementary in sequence to the rDNA promoter, pRNA-binding is required for
	heterochromatin formation and rDNA silencing (By similarity).

	interacting protein 5 antibody, Tip5 antibody, hWALp3 antibody
