PubMed:24332854, PubMed:23755363, PubMed:26341627). Constitutes the pore-forming and
calcium-conducting subunit of the uniporter complex (uniplex) (PubMed:23755363). Activity is
regulated by MICU1 and MICU2. At low Ca(2+) levels MCU activity is down-regulated by MICU1
and MICU2, at higher Ca(2+) levels MICU1 increases MCU activity (PubMed:24560927,
PubMed:26903221). Mitochondrial calcium homeostasis plays key roles in cellular physiology
and regulates cell bioenergetics, cytoplasmic calcium signals and activation of cell death
pathways. Involved in buffering the amplitude of systolic calcium rises in cardiomyocytes
(PubMed:22822213). While dispensable for baseline homeostatic cardiac function, acts as a
key regulator of short-term mitochondrial calcium loading underlying a \'fight-or-flight\'
response during acute stress: acts by mediating a rapid increase of mitochondrial calcium in
pacemaker cells (PubMed:25603276). participates in mitochondrial permeability transition
during ischemia-reperfusion injury (By similarity). Regulates glucose-dependent insulin
secretion in pancreatic beta-cells by regulating mitochondrial calcium uptake
(PubMed:22904319, PubMed:22829870). Mitochondrial calcium uptake in skeletal muscle cells
is involved in muscle size in adults (By similarity). Regulates synaptic vesicle endocytosis
kinetics in central nerve terminal (By similarity). Involved in antigen processing and presentation
(By similarity).
