	by alternative splicing. Isoform 1 functions as permease that mediates the transport of the
	cationic amino acids (arginine, lysine and ornithine), and it has much higher affinity for arginine
	than isoform 2. Isoform 2 functions as low-affinity, high capacity permease involved in the
	transport of the cationic amino acids (arginine, lysine and ornithine) (PubMed:9174363). May
	play a role in classical or alternative activation of macrophages via its role in arginine transport.
