	miRNA-mediated repression, translational repression during translational initiation and general
	transcription regulation. Additional complex functions may be a consequence of its influence
	on mRNA expression. May be involved in metabolic regulation, may be involved in recruitment
	of the CCR4-NOT complex to deadenylation target mRNAs involved in energy metabolism.
	Involved in mitotic progression and regulation of the spindle assembly checkpoint by regulating
	the stability of MAD1L1 mRNA. Can repress transcription and may link the CCR4-NOT complex
	to transcriptional regulation, the repressive function may involve histone deacetylases. Involved
	in the maintenance of emryonic stem (ES) cell identity.
