	muscle-specific E-box occupancy by homodimers. May also negatively regulate bHLH-
	mediated transcription through an N-terminal repressor domain. Serves as a key regulator of
	acinar cell function, stability, and identity. Also required for normal organelle localization in
	exocrine cells and for mitochondrial calcium ion transport. May function as a unique regulator
	of gene expression in several different embryonic and postnatal cell lineages. Binds to the E-
	box consensus sequence 5\'-CANNTG-3\' (By similarity).
