	to convey information from gene-specific regulatory proteins to the basal RNA polymerase II
	transcription machinery. Mediator is recruited to promoters by direct interactions with
	regulatory proteins and serves as a scaffold for the assembly of a functional preinitiation
	complex with RNA polymerase II and the general transcription factors. Binds to and activates
	cyclin-dependent kinase CDK8 that phosphorylates the CTD (C-terminal domain) of the large
	subunit of RNA polymerase II (RNAp II), which may inhibit the formation of a transcription
	initiation complex.
