## Target Details

Target:	CYBB
Alternative Name:	CYBB ( <a href="#">CYBB Products</a> )
Background:	Background: Critical component of the membrane-bound oxidase of phagocytes that generates superoxide. It is the terminal component of a respiratory chain that transfers single electrons

## Target Details

from cytoplasmic NADPH across the plasma membrane to molecular oxygen on the exterior. Also functions as a voltage-gated proton channel that mediates the H<sup>+</sup> currents of resting phagocytes. It participates in the regulation of cellular pH and is blocked by zinc.
