## Target Details

Target:	DOM3Z
Alternative Name:	DXO ( <a href="#">DOM3Z Products</a> )
Background:	Background: Ribonuclease that specifically degrades pre-mRNAs with a defective 5' end cap and is part of a pre-mRNA capping quality control. Has decapping, pyrophosphohydrolase and

## Target Details

5\'-3\' exonuclease activities. Has decapping activity toward incomplete 5\' end cap mRNAs such as unmethylated 5\' end-capped RNA to release GpppN and 5\' end monophosphate RNA. The 5\' end monophosphate RNA is then degraded by the 5\'-3\' exoribonuclease activity, enabling this enzyme to decap and degrade incompletely capped mRNAs. Also possesses RNA 5\'-pyrophosphohydrolase activity by hydrolyzing the 5\' end triphosphate to release pyrophosphates (By similarity).
