coactivation, by binding at least ADA, CAV1, IGF2R, and PTPRC. Its binding to CAV1 and
CARD11 induces T-cell proliferation and NF-kappa-B activation in a T-cell receptor/CD3-
dependent manner. Its interaction with ADA also regulates lymphocyte-epithelial cell adhesion.
In association with FAP is involved in the pericellular proteolysis of the extracellular matrix
(ECM), the migration and invasion of endothelial cells into the ECM. May be involved in the
promotion of lymphatic endothelial cells adhesion, migration and tube formation. When
overexpressed, enhanced cell proliferation, a process inhibited by GPC3. Acts also as a serine
exopeptidase with a dipeptidyl peptidase activity that regulates various physiological processes
by cleaving peptides in the circulation, including many chemokines, mitogenic growth factors,
neuropeptides and peptide hormones. Removes N-terminal dipeptides sequentially from
polypeptides having unsubstituted N-termini provided that the penultimate residue is proline.
